Certificates Factory and School Hygiene.

MEDICAL OFFICER OF HEALTH.

BOLLINGTON.

E. CHADWICK, PRINTER & STATIONER,

18, HIGH STREET.

Annual Report of the Medical Officer of Health for 1938.

*To the Chairman and Members of the
Bollington Urban District Council.*

MR. CHAIRMAN AND GENTLEMEN,

I have the honour to submit to you, for your consideration, my Annual Report on the Health and Sanitary Administration of the District for the past year.

The Urban District of Bollington, as you know comprises some 1442 acres, and is situate in a valley, and on its adjacent hill sides is the westerly edge of the East Cheshire range of hills.

It is distant about $3\frac{1}{2}$ miles in a North Easterly direction from the Borough of Macclesfield. It is also some 11 miles from the Town of Stockport and 17 miles from the City of Manchester.

The valley forms a natural cul-de-sac a little off the Manchester and Macclesfield main road.

The District is a bracing and healthy one, and has excellent sites for residential property on its hill sides.

During 1938 there seems to have been a greater desire to build houses by private enterprise, and in several parts of the district land is being opened up for building purposes, which certainly is very ideally situated from a health and beauty standpoint.

The character of the soil and sub-soil varies greatly. Speaking generally it is sandstone with coal measures.

The staple industry of the place is the Cotton Trade. The village has three mills engaged in Fine Cotton Spinning, and one in Calico Printing. Two Paper Staining Firms and Wireless Bulb Manufactory have works in the village, while just outside the boundaries a Card Factory was opened in 1926. All these works find indoor employment for a large number of the inhabitants.

Outdoor employment is to be had in the Stone Quarries which abound in the neighbourhood, and also at the Fire Clay Works and Coal Pits situate in Pott Shrigley, a little over two miles away.

These different occupations which are followed by the inhabitants would appear to be of a healthy character. Mill life in a country district like this is devoid of a great many of the more harmful influences associated with the same life in the larger cities and towns.

Bollington like every other town in the country has been very badly hit by unemployment, especially in the Cotton Trade, but has been fortunate in the respect that there does not seem to have been the very urgent distress other towns have experienced. During 1938 there seems to have been a great improvement in both the Cotton and other industries, and there has been a consequent relief in the unemployment, which I sincerely hope may continue permanently.

Ample opportunities are provided in the village for Recreation. There is a fine Recreation Ground suitably equipped with Bowling Green, Cricket and Football Pitches, Tennis Courts, Etc.

Hospital and Gratuitous Medical Relief are well provided for at the General Infirmary, Macclesfield, and advantage of this is taken chiefly by cases requiring operations and other institutional treatment.

This Institution is now provided with a first-class X-Ray installation and an artificial sunlight plant, of which every opportunity is taken by patients from the village where such treatment is advisable. Thanks to Lord Nuffield they now possess an Artificial Lung.

The number of cases treated by the Macclesfield Infirmary from Bollington and Pott Shrigley during 1938 was 109 in-patients.

I should like to record my appreciation of the very great kindness of the Committee and Medical and Nursing Staff at the Institution, and of their readiness to admit the cases sent to them from this district. The Bollington and Pott Shrigley Infirmary Committee are to be congratulated on their efforts to support this Institution, and I think a large number of people are finding the benefit of being regular contributors, entitling them to treatment when occasion arises.

I now pass on to Statistical Work in the order that the Ministry of Health desire.

1.—GENERAL STATISTICS.

Area (Acres) 1442.

Population 1938, estimated 5061.

Number of Inhabited Houses, 1938, 1639.

Rateable Value, 1938, £22,900.

Estimated net product of a penny rate. £83.

2. EXTRACTS FROM VITAL STATISTICS FOR THE YEAR.

BIRTHS.					Males.	Females.	Total.
Legitimate	33	35	68
Illegitimate	1	—	1
							—
							69

Live Birth Rate	13.6 per 1000 of estimated residential population.
Still Births	0 Female (legitimate), Total 0.
Birth Rate of Stillborn Children		0 per 1000, total live and still births.
Birth Rate of Stillborn Children		0 per 1000 estimated population.

DEATHS (All Ages)					Males.	Females.	Total.
					33	26	59
Crude Death Rate	11.6 per 1000.		
Adjustable Death Rate by the comparability Factor of .96					11.13.
Puerperal Sepsis	Nil.
Other Puerperal Causes		Nil.
Rate per 1000 Births	Nil.
Deaths of Children under 1 year					Males	Females	Total
Legitimate	1	2	3
Illegitimate	—	—	—
							3
Death Rate of Infants under 1 year of age per 1000 like deaths							40.3
„ Legitimate	40.3
„ Illegitimate	Nil.
Number of Women dying in, or consequent of Child-birth						...	Nil.
Death Rate from Tuberculosis, 1938.							
Pulmonary		Nil.		
Non-Pulmonary19.		
Death Rate from Cancer						...	1.9 per 1000.
Deaths from Measles (all ages)				Nil.	
„	Whooping Cough)			Nil.	
„	Diarrhoea (under 2 years)			Nil.	

From the above figures the outstanding features are :—

Our death rate for 1938 is 11.13 per 1000 as compared with 9.6 per 1000 in 1937.

There is an increase in the Birth Rate which this year is 13.6 per 1000 as against 12.0 in 1937 and 15.1 per 1000 for England and Wales.

There is a slight decrease in the population for 1938 from 5081 to 5061.

During 1938 there were 3 infant deaths under 1 year of age, which gives an Infantile Death Rate of 40.3 per 1000 live births as against 53 per 1000 live births for England and Wales which is a very satisfactory state. Of the three Infantile Deaths, two were due to prematurity and one at four months was due to Lobar Pneumonia.

There is a slight increase of our Death Rate from 9.6 per 1000 to 11.13, which is still below that of England and Wales which stands at 11.6.

Under the auspices of the County Council an Ante-Natal Scheme for the care of expectant mothers is now working, which means that any expectant mother on the recommendation of the Maternity Nurse can have ante-natal medical care and treatment free of charge in necessitous cases. This, in my opinion, is a splendid principle, and should do much to lower the Maternal Mortality Rate in the country.

During 1938 there were no noteworthy causes of sickness, nor had we any deaths from either Measles, Whooping Cough, Infantile Diarrhoea, or any of the Epidemic Diseases, which is an extremely satisfactory state of affairs.

The death rate from Cancer is 1.9 per 1000 of the population, and I think we as a district are doing our share in supporting the efforts for furthering the work in Cancer Research.

During 1938 there were no deaths in the village due to Child Birth nor any cases of Puerperal Sepsis.

I am still very pleased to be able to again state there have been no deaths in the Urban District due to Child-birth, and considering the Maternal Mortality of England and Wales is 2.97 per 1000 births, I think this reflects great credit on all those people having charge of the Ante-Natal Welfare and the actual confinements in the area. It is also very creditable that during 1938 there were no cases of Puerperal Sepsis notified nor any cases of Ophthalmia Menatorum.

The chief causes of Deaths for 1938 are as follows :—

				M	F
Other Digestive Disorders	1	2
Acute and Chronic Nephritis	1	3
Congenital Debility and Premature Birth			...		2
Suicide		1
Other Violence	1	
Other Defined Diseases	1	2
Diabetes	1	
Cerebral Haemorrhage	5	2
Heart Disease	9	3
Other Circulatory Diseases	3	4
Bronchitis	1	1
Pneumonia	3	
Influenza		1
Other Forms of Tuberculosis	1	
Cancer	5	5
Appendicitis	1	
				33	26
Total all causes				59	

3.—NOTIFIABLE DISEASES DURING THE YEAR 1938.

Disease	No. of Cases	No admitted to Hospital	Deaths
Scarlet Fever	7	4	—
Diphtheria	—	—	—
Para Typhoid	—	—	—
Puerperal Pyrexia	1	—	—
Pneumonia	4	—	—
Erysipelas	1	—	—
Chicken Pox	69	—	—
Influenzal Meningitis	—	—	—
Meningitis	—	—	—

During 1938 we had a few cases of Infectious Diseases, but I am glad to report we had no deaths from either Scarlet Fever, Diphtheria, Chicken Pox or Measles. Arrangements have now been made for procuring Serum for Prophylactic Immunisation against Diphtheria if required, and the doctors in the area have been notified to that effect.

Our rates for the number of cases of Scarlet Fever and Diphtheria notified per 1000 are respectively 1.4 and nil.

It is extremely satisfactory to note we had no cases of Diphtheria notified during 1938.

The cost of the Council for patients admitted to the Macclesfield Isolation Hospital was £168 3 9 for 1938.

There have been no cases of Ophthalmia Neonatorum during the year 1938.

TUBERCULOSIS.

Age Period	NEW CASES.				DEATHS.			
	Pulmonary		Non-Pulmonary		Pulmonary		Non-Pulmonary	
	Males	Females	Males	Females	Males	Females	Males	Females

45
55
65
	1	1	...	1	1	...

During 1938 there were 2 specimens of Sputum sent for Bacteriological Examination to the County Laboratory, Chester : 1 had negative results and 1 was positive.

It has not been found necessary to take any action under the Public Health Prevention of Tuberculosis Regulation, 1928.

There was only one death from Tuberculosis during 1938, and this occurred in the local Infirmary : "Generalised Tuberculosis with probable primary lesion in the lung." This case was never notified to me

As far as I remember this is the only case we have had of a death from Tuberculosis that has not been notified prior to death. The Scheme for the notification of Tuberculosis appears to have worked very satisfactorily up to date and also our check with the County Council, and there has been no cause to take any action in the area.

4.—SUMMARY OF NURSING ARRANGEMENTS. HOSPITAL & OTHER INSTITUTIONS FOR THE DISTRICT.

(a) **INFECTIOUS DISEASES.**—For the accommodation of Infectious Disease Cases, we have an agreement with the Macclesfield Corporation to a retaining right of four beds in their Isolation Hospital which, so far, has proved adequate for our requirements, especially so since our incidence of Infectious Diseases is so low and quite a number of our cases are treated at home, in fact during 1938 only 4 cases were referred to Hospital treatment.

We are in negotiations with Macclesfield Corporation which are now almost completed, for a retaining right on 7 beds in the new joint Hospital Scheme as against 4 under the old scheme. The 4 beds have always been adequate up to the present, but under our new arrangements it will be possible to admit and isolate several other diseases apart from Scarlet Fever and Diphtheria, viz., Whooping Cough, Measles and Puerperal Pyrexia.

This accommodation has proved more than adequate as during 1938 only 4 cases of infectious disease, viz., Scarlet Fever were referred to hospital for treatment.

(b) **SMALL-POX.** During 1938 there have been no cases of Small-Pox. We have a retaining right of two beds in the Macclesfield Small-Pox Hospital if required.

(c) **TUBERCULOSIS.**—These cases are dealt with :

- | | |
|---|--|
| (a) Domiciliary Treatment under care of own doctor. | |
| (b) Hospital | } Under care of Cheshire
County Tuberculosis Scheme |
| (c) Sanatorium | |
| (d) Dispensary | |

(d) **CHILD WELFARE.**—There is an Infant Welfare Clinic held on alternate Thursdays under the supervision of the Cheshire County Council Health Authorities (Maternity & Child Welfare Department) supported by a Committee of local ladies. The attendance at the Clinic of the mothers is good and regular, and the scheme generally is proving very beneficial to the child life of the village.

A Scheme has been put forward and ground has been purchased for a New Welfare Centre in the district. It is hoped to be completed in 1939, as the building is now in progress. This will fill a much desired want as a very enthusiastic Voluntary Committee have been very much handicapped in their work by lack of suitable accommodation.

(e) A further clinic for children up to 5 years of age to attend for periodic examination "Toddler's Clinic" once a quarter, has now been inaugurated and should be a great benefit for the more adult children until they become of school age when they automatically come under the routine examination by the School Medical Officer.

(f) **VENEREAL DISEASE.**—Our nearest centre for treatment of these diseases is Stockport, and is under the supervision of the Cheshire County Authorities. In my opinion I think, although we have very few cases of Venereal Disease, it would in some ways be better if we had a treatment centre a little nearer.

(g) **AMBULANCE FACILITIES.**—Cases of sickness or accident requiring removal to Hospital are conveyed by the Macclesfield Borough Ambulance or by private conveyance. Arrangements have now been settled with the Macclesfield Corporation for the use of the Borough Ambulance in necessitous cases, and from my experience this is proving very efficacious, and they are very quick in their response to any calls.

Infectious Disease cases are conveyed by the Macclesfield Fever Ambulance

There are Male and Female contingents of the St. John Ambulance Association in the district who are always willing to render first-aid and are of considerable help in a scattered industrial area such as Bollington.

(h) SCHOOL CHILDREN.—The routine medical examination of School children is carried out by the staff of the Health Department of the Cheshire County Council.

(i) Nurse Wilcock, our only resident Midwife, is doing excellent work in the district, and during the year has attended most of the 69 births we had in 1938. From my previous remarks I think her work is to be very highly commended, as the very satisfactory returns given in the report show.

(j) HOME NURSING.—By Nurse Wilcock, "Queen's Nurse," who is doing excellent work amongst the sick. A car is provided for her use, which is a tremendous asset and very necessary in a scattered district like Bollington.

(k) WELFARE SCHEMES.—The Fine Cotton Spinners' Association, who own three large mills in the area, have now instituted Welfare Centres at their mills under the charge of two welfare workers. Rest Rooms, Recreation Rooms and Recreation Grounds are now provided for their operatives, and the Scheme is of considerable benefit to their employees, and one which is worthy of copy by other employers of labour.

(l) PATHOLOGICAL WORK.—Arrangements are now in force with the Laboratory of the Macclesfield Public Health Department and the Laboratory at the Parkside Hospital, for any Pathological work that may be required to be done by the Health Department. This arrangement is more satisfactory than our previous one since it is more expeditious and the postal delay is saved.

(m) During 1938 my Council have come to an arrangement with the Macclesfield Infirmary for the use of the Infirmary Mortuary for any cases requiring Post Mortem Examination.

(n) PUBLIC HEALTH STAFF.—A Part-time Medical Officer, John W. Chadwick, M.R.C.S. (Eng.), L.R.C.P. (Lon.) D.P.H. (Man.) and a part time Sanitary Inspector, Chas. A. Smith, Certified Royal Sanitary Institute, Certificated Sanitary Inspector (Man. Univ.)

SANITARY ADMINISTRATION.

During 1938 a survey of the sanitary conditions of the district was made by the County Medical Officer of Health and the County Sanitary Officer, along with myself and Mr. Smith, our Sanitary Inspector. He reported our conditions were good and well administered, the points requiring attention were under the consideration of my Council at the time and are being dealt with in due course.

DRAINAGE AND SEWERAGE.—The Sewers in the District continue to work satisfactorily. The system of sewage disposal consists of sedimentation tanks, storm water tanks, percolating filters with revolving distributors and humus tanks. No complaints have been received in respect of effluent during 1938 from the Mersey and Irwell Rivers Board.

In all parts of the district we have now carried out the change over to a Water Carriage System with the exception of those areas where at present owing to a lack of proper water supply and sewerage arrangements conversion is impossible.

CLOSET ACCOMMODATION.—

The total number of Privy Closets in the district are 49			
„	Privy Ashpits	„	40
„	Pail Closets	„	13
„	Dry Ashpits	„	21
„	Dust Bins	„	1396

SLAUGHTERHOUSES.—There are three Slaughterhouses in the District licensed by the Council ; they are all in good condition.

MEAT INSPECTION.—During the year 1938 the following Inspections have been made by the Medical Officer of Health and Sanitary Officer under the Public Health (Meat) Regulations, 1924.

Number of Animals notified for Slaughter ...	580	} 75.3 p.c. Inspected
„ Inspected after Slaughter	440	

Whole Carcases of Meat Condemned as unfit for human consumption 4 one being a case of Anthrax and one a contact case.

Portions of Carcases Condemned for human consumption 27.

Offals Condemned : Liver 9, Lungs 23, Heads 9.

Under the Tuberculosis Order, 1938, which is administered by the Ministry of Agriculture and Fisheries 45 animals were notified for slaughter Of these, 10 carcases were passed for human consumption, the rest being totally condemned.

SMOKE ABATEMENT.—During 1938 12 observations were made on smoke from various chimneys in the district. No action was taken under the Smoke Abatement Act, 1936.

DAIRIES AND MILK SUPPLY.—During 1938, 24 samples of milk were taken in the Urban District for cleanliness, 12 of which were taken by the County Medical Officer. Of these sample 16 samples were satisfactory.

Pasturised milk is on sale in the district.

During the year the farms in our area have been frequently inspected and though in most cases not fulfilling the ideal conditions, attempts to do so are certainly being made, and on the whole the conditions of milk production are good.

HOUSE REFUSE.—This service is under the control of the Sanitary Inspector, and a weekly collection of Dust Bins is in operation throughout the District, and a weekly collection of refuse from shopkeepers maintained without extra charge

The refuse is disposed of by Controlled Tipping, a system which has now been in operation for the past seven years and giving very satisfactory results at a very reasonable cost.

The amount of refuse collected and disposed during the past year has been 1481 loads at a cost of £690, equal to 2/8.4d. per head of the population.

RIVERS AND STREAMS.—The condition of these remain much the same as last year. Such matters as waste from houses and trade effluent undoubtedly do still find their way into the River Dean. There has not, however, been any great complaint as to foul smell arising from it during any period of the year.

There are no obnoxious trades carried on in the village.

SHOPS ACT, 1934—SHOPS & OFFICES.—No action has been taken since all conditions are satisfactory.

ERADICATION OF BED BUGS—COUNCIL HOUSES.—No proceedings for this purpose have been required. One other house has been treated successfully by several applications of Zaldicide.

SCHOOLS —There are five Elementary Schools in the district.

Notification of cases of Infection amongst the scholars are sent by the principal teachers to the Medical Officer of Health who visits the School and the homes of the children, and takes what action he considers advisable.

WATER SUPPLY. —The Water Supply is obtained from three Works—Lowerhouse, Dane Bent and Millbrook—in the neighbouring township of Rainow some two or three miles away. The supply is constant.

1. LOWERHOUSE. The water is obtained from these works from three Boreholes and adits driven in the Millstone Grit.

2. DANE BENT —The water of these works is obtained from a boring 427 feet deep in the Millstone Grit. When the supply from Lowerhouse fails during the periods of drought, the water is raised from the borehole of these works (Dane Bent) by air lift, and pumped into the Distribution Main by a force pump.

3 MILL BROOK.—This consists of two boreholes put down in Millstone grit to a depth of 262 feet.

The boreholes are protected from the infiltration of surface water down to a depth of 105 feet by a steel lining.

The water is raised from the boreholes and delivered into the high level reservoir by pumping plant.

The whole of the water is Chlorinated at the Lowerhouse and Mill Brook Works.

A constant and plentiful supply of water has been available during the year.

During 1938 five samples of water were taken for Bacteriological Examination. Two were samples of the Council's Water Supply and the results of the examination were excellent.

Three samples were taken of private supplies and in each case evidence of pollution was proved by the examination.

One of the private supplies has been replaced by a supply of the Council's water, and it is anticipated the others will be replaced when the new Water Scheme is operative.

Progress has been made during the year with the Construction of a new Reservoir of 200,000 gallons capacity and approximately $3\frac{1}{2}$ miles of new mains, and it is hoped the work will be in use before the end of 1939.

6.—HOUSING.

During 1938, 23 houses, all suitable for working-class dwellings, were built by private enterprise.

The following figures are for the year 1938 :—

1.—INSPECTION OF DWELLING-HOUSES DURING THE YEAR.

1 (a)	Total number of dwelling-houses inspected for housing defects (under Public Health or Housing Acts)	105
(b)	Number of Inspections made for the purpose	130
2 (a)	Number of dwelling-houses (included under sub-head 1 above) which were inspected and recorded under the Housing Consolidated Regulations, 1925	82
(b)	Number of Inspections made for the purpose	120
3	Number of dwelling-houses to be found in a state so dangerous or injurious to health as to be unfit for human habitation ..	7
4	Number of dwelling-houses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation	82

2.—REMEDY OF DEFECTS WITHOUT SERVICE OF FORMAL NOTICE.

	Number of defective dwelling-houses rendered fit in consequence of informal action by the Local Authority or their Officers ..	12
--	--	----

3.—ACTION UNDER STATUTORY POWERS.

A.—Proceedings under Section 9 of the Housing Act, 1936 : —

1	Number of dwelling-houses in respect of which notices were served requiring repairs ..	82
2	Number of dwelling-houses which were rendered fit after service of formal notices :—	
(a)	By Owners ..	66
(b)	By Local Authority in default of Owners ..	Nil.

B.—Proceedings under Public Health Acts :—

1	Number of dwelling-houses in respect of which notices were served requiring defects to be remedied ...	4
2	Number of dwelling-houses in which defects were remedied after service of formal notices :—	
(a)	By Owners ..	4
(b)	By Local Authority in default of Owners ..	Nil.

C.—Proceedings under Sections 11 and 13 of the Housing Act, 1936 :

1	Number of dwelling-houses in respect of which Demolition Orders were made ...	7
2	Undertakings under Sub-section 2 accepted ...	1
3	Number of dwelling-houses demolished in pursuance of Demolition Orders ..	Nil.

D.—Proceedings under Section 12 of the Housing Act, 1936 :—

1	Number of separate tenements or underground rooms in respect of which Closing Orders were made or undertaking given under Sub-section 19 ..	Nil.
2	Number of separate tenements or underground rooms in respect of which Closing Orders were determined, the tenement or room having been rendered fit ...	Nil.

4. HOUSING ACT, 1935—OVERCROWDING.

(a) (i)	Number of dwellings overcrowded at the end of the year	...	5
(ii)	Number of families dwelling therein...	...	5
(iii)	Number of persons dwelling therein...	...	29
(b)	Number of new cases of overcrowding reported during the year	...	Nil
(c) (i)	Number of cases of overcrowding relieved during the year	...	1
(ii)	Number of persons concerned in such cases	...	7
(d)	Particulars of any cases in which dwelling-houses have again become overcrowded after the Local Authority have taken steps for the abatement of overcrowding	...	Nil
(e)	Any other particulars with respect to overcrowding conditions upon which the Medical Officer of Health may consider it desirable to report	...	Nil

7. FACTORIES ACT, 1937.

1.—INSPECTION OF FACTORIES.

Premises	Inspections	No. of Written Notices	Prosecutions
Factories (including Factory Laundries)	10	Nil	Nil
Workshops (including Work Laundries)	8	Nil	Nil
Workplaces (other than Outworkers' premises included in part 3 of this Report)	—	—	—
Total	18	Nil	Nil

2.—DEFECTS FOUND IN FACTORIES, WORKSHOPS AND WORKPLACES.

Found	Number of Defect		No. of Prosecutions.
	Remedied	Referred to H. M. Inspector.	
Nuisance under the Public Health Acts		Nil.	

ANNUAL REPORT OF THE MEDICAL OFFICER OF HEALTH
FOR THE YEAR, 1938,

For the Urban District of Bollington, in the County of Cheshire, on the administration of the Factory and Workshop Act, 1901, and the Factories Act, 1937 (which superceded the Act of 1901 on 1st July, 1938).

1 INSPECTIONS for purposes of provisions as to health (including Inspections made by Sanitary Inspector :—

Premises	Inspections	No. of Written Notices	Occupiers Prosecuted
Factories with mechanical power	18	Nil	Nil
Factories without mechanical power	Nil	Nil	Nil
Other Premises under the Act (including works of building and engineering construction but not including outworkers' premises)	—	—	—
Total	18	—	—

2.—DEFECTS FOUND.

Particulars	Number of Defects			No of defects in respect of which Prose- cutions were instituted
	Found	Remedied	Referred to H. M. Inspector	
Want of Cleanliness (S 1)	—	—	—	
Overcrowding (S 2)	—	—	—	
Unreasonable Temperature (S.3)	—	—	—	
Inadequate Ventilation (S.4)	—	—	—	
Ineffective drainage of floors (S.6)	—	—	—	
Sanitary Conveniences (S.7)				
„ Insufficient			—	
„ Unsuitable or defective			—	
„ Not separate for sexes			—	
Other Offences 				
(Not including offences relating to Home Work or offences under the Sections mentioned in the Schedule to the Ministry of Health (Factories and Workshops Transfer of Powers) Order 1921, and re-enacted in the 3rd Schedule to the Factories Act, 1937.)				
Total	—	—	—	

OUTWORK IN UNWHOLESOME PREMISES.

(Section 108 of Act of 1901 ; Section III of Act of 1937)

No such occupation in the District.

In conclusion, I should like to thank Mr. Smith, the Sanitary Inspector, who is always willing to render any assistance, and carry out any instructions in connection with the health of the township.

I have the honour to be, Gentlemen,

Your obedient servant,

JOHN W. CHADWICK,

Medical Officer of Health.

GENERAL ORDER OF LOCAL GOVERNMENT BOARD (MEDICAL OFFICER OF HEALTH AND
INSPECTOR OF NUISANCES) DECEMBER 13th, 1910.
